Beyma are introducing a number of new products here at Prolight & Sound 2018, from subwoofers through to small compression drivers.

Beyma PL+S 2018

Two new subwoofers join the already successful 18LEX1600Nd, with new 21" (**21LEX1600Nd**) and 15" (**15LEX1600Nd**) models now available. Both subwoofers feature a specially designed frame, which has been created to have optimum mechanical performance whilst still featuring an attractive shape inspired by the work of Gaudi. With long excursion, they are capable of very high output whilst maintaining very low distortion, with better performance in vented cabinets and loaded horn designs. Both include Beyma's exclusive Maltcross cooling technology.

New 8", 10", 12" and 15" woofers are also being released, with a consistent concept designed for high performance systems where high sensitivity, high linearity, low distortion, low weight and high total SPL are required. The **8MC500Nd**, **10MC700Nd**, **12MC700Nd** and **15MC700Nd** woofers are perfectly suited for high efficiency bass and mid/bass applications .

Finally, Beyma introduces three new compression drivers for high frequency applications. With coil of 1.75 " (44.4 mm) and 1" (25.4 mm) throat, the new **CD11Fe**, **CD11Fe/S** and **CD11Nd** feature Beyma's exclusive PM4 polymer, which provides for a natural timbre alongside competitive linearity, bandpass and distortion thresholds.
